

1 Σ_1^1 sets and trees on ω

Poznámka (Notation)

- $\mathbb{S} := \omega^{<\omega}$;
- $\nu|_k = (\nu(0), \dots, \nu(k-1))$, $\nu \in \mathbb{S} \cup \omega^\omega$ ($\nu|_0 = \emptyset$, empty sequence);
- $t < s \equiv \exists s' \in \mathbb{S} \cup \mathcal{N} : s = t \wedge s'$ ($t \in \mathbb{S}$, $s \in \mathbb{S} \cup \mathcal{N}$);
- $\mathcal{N} := \omega^\omega$;
- $|s|$ is the length of s , $s \in \mathbb{S}$ ($s = (s(0), \dots, s(k-1)) \implies |s| = k$);
- $s \in \mathbb{S}$, $\nu \in \mathbb{S} \cup \mathcal{N}$: $s \wedge \nu = (s(0), \dots, s(|s| - 1), \nu(0), \dots)$.

Definition 1.1 (Souslin set (on TP space))

X topological space. We say $S \subset X$ be Souslin $\Leftrightarrow \exists (F_s)_{s \in \mathbb{S}}$ Souslin scheme of closed subset of X such that $S = \mathcal{A}_s(F_s) = \bigcup_{\sigma \in \mathcal{N}} \bigcap_{n \in \omega} F_{\sigma|_n}$.

Poznámka

- P Polish topological space, then $A \in \Sigma_1^1 \Leftrightarrow A$ Souslin in P . (We already know.)
- P topological space, then $A \subset P$ Souslin $\Leftrightarrow \exists F \in \Pi_1^0(\mathcal{N} \times P) : A = \Pi_P(F)$. (Difficult.)
- We will assume only regular Souslin scheme (RSS): $F_{s \wedge t} \subset F_s$, $s, t \in \mathbb{S}$ and $F_\emptyset = P$.

1.1 Souslin operation and trees

Definition 1.2 (Trees on ω , infinite branch, ill-founded trees, well-founded trees)

We define set of trees \mathcal{T} by $\mathcal{T} := \{T \in \mathcal{P}(\mathbb{S}) \mid \forall s \in T, t \in T : t < s \implies t \in T\}$.

$T \in \mathcal{T}$ has infinite branch $\equiv \exists \sigma \in \mathcal{N} \forall n \in \omega : \sigma|_n \in T$ (i.e. $\sigma \in [T]$) (i.e. $[T] \neq \emptyset$).

Trees with infinite branches are called ill-founded (IF). The set of IF trees is denoted by \mathcal{T}_I . Trees without infinite branches are called well-founded (WF). The set of WF trees is denoted by \mathcal{T}_W .

$\mathcal{T}_s := \{T \in \mathcal{T} \mid s \in T\}$ are all trees containing $s \in \mathbb{S}$.

┌

Poznámka

$\mathbb{T}_I = \bigcup_{\sigma \in \mathcal{N}} \bigcap_{n \in \omega} \mathcal{T}_{\sigma|_n}$.

└

$$\mathcal{T}^* := \mathcal{T} \setminus \{\emptyset\}, \mathcal{T}_W^* = \mathcal{T}_W \setminus \{\emptyset\}.$$

Lemma 1.1

Let X be a topological space, $(F_s)_{s \in \mathbb{S}}$ RSS of closed subsets of X , $S := \mathcal{A}_s(F_s)$. Define $f(x) : X \rightarrow \mathcal{T}^*$ by $f(x) := \{s \in \mathbb{S} \mid x \in F_s\}$. Then $F_s = f^{-1}(\mathbb{T}_s)$ and $S = f^{-1}(\mathcal{T}_I)$.

┌

Důkaz (?)

a) „ $f : X \rightarrow \mathcal{T}^*$ “: $s \in f(x) \implies x \in F_s \implies F_s \subset F_t \implies x \in F_t \implies t \in f(x) \ (t < s)$.

b) $x \in F_s \Leftrightarrow s \in f(x) \Leftrightarrow f(x) \in \mathcal{T}_s \Leftrightarrow x \in f^{-1}(\mathbb{T}_s)$

c) lemma \Leftarrow b) and the next remark. □

└

Poznámka

TODO!!! $\mathcal{T} \rightarrow \mathcal{T}^*$.

┌

Důkaz

„ \implies “: lemma?. „ \Leftarrow “: $S = f^{-1}(\mathbb{T}_I) = f^{-1}(\bigcup_{n \in \omega} \mathcal{T}_{\sigma|_n}) = \bigcup_{\sigma \in \mathcal{N}} \bigcap_{n \in \omega} f^{-1}(\mathbb{T}_{\sigma|_n})$, where $f^{-1}(\mathbb{T}_{\sigma|_n}) \in \Pi_1^0(X) \implies$ Souslin. □

└

1.2 Trees as PTS (compact)

Poznámka (Topology on trees)

$\mathcal{P}(\mathbb{S}) = \{A \subset \mathbb{S}\} = \{0, 1\}^{\mathbb{S}}$ (product topology of product of discrete topologies) which is compact and homeomorphic to 2^ω . We assume on \mathbb{T} subspace topology.

Tvrzení 1.2

$\mathbb{T}, \mathcal{T}^* \in \Pi_0^1(\{0, 1\}^{\mathbb{S}})$, $\{\mathbb{T}_s, \mathbb{T}^* \setminus \mathbb{T}_s, s \in \mathbb{S}\}$ form a subbase of topology in \mathbb{T} .

┌

Poznámka

$\mathcal{T}, \mathcal{T}^*$ is compact metric space, so PTS.

└

┌

Důkaz

$S \in \{0, 1\} \setminus \mathbb{T} \Leftrightarrow \exists s, t \in \mathbb{S}, s < t : t \in S \wedge s \notin S \implies \{0, 1\} \setminus \mathbb{T} = \bigcup_{t \in \mathbb{S}} \bigcup_{s < t} (\{T, \chi_T(t) = 1\} \cap \{T; \chi_T(s) = 1\})$.

$\{T | \chi_T(t) = 1\}, \{T | \chi_T(s) = 0\}$ is subbase of product topology.

$\mathcal{T}^* = \mathcal{T} \cap \{A \in \{0, 1\} | \chi_A(\emptyset) = 1\} \implies \mathcal{T}^* \in \Pi_1^0(\mathcal{T}) \implies \mathcal{T}^*$ is compact.

└

□

1.3 Properties of f from the lemma

Definice 1.3

$T \in \mathbb{T}, \sigma \in \mathcal{N}. h_\sigma(T) := \sup \{k \in \omega | \sigma|_k \in T\} \in \omega \cup \{\infty\}$.

Poznámka (Remind Lebesgue–H?–Banach characterization)

X, Y metric spaces, Y separable, $1 \leq \alpha < \omega_1, f : X \rightarrow Y$. Then f is $\text{Baire}_\alpha \Leftrightarrow f$ is $\Sigma_{\alpha+1}^0(X)$ -measurable.

Tvrzení 1.3

X metrizable (we need only $\Sigma_1^0(X) \subset \Sigma_2^0(X)$), $S \subset X$ Souslin. Then there exists $f : X \rightarrow \mathbb{T}$ such that:

1. $f^{-1}(\mathbb{T}_I) = S$;
2. $f^{-1}(\mathbb{T}_s) \in \Pi_1^0(X), s \in \mathbb{S}$;
3. $h_\sigma \circ f$ is upper semi-continuous ($h_\sigma \circ f : X \rightarrow \mathbb{R}^*$), $\sigma \in \mathcal{N}$ (i.e. $\{x \in X | h_\sigma(f(x)) < n\}$ is open $\forall \sigma \in \mathcal{N}, n \in \mathbb{R}^*$);
4. f is Baire_1 (i.e. Σ_2^0 -measurable).

┌

Důkaz

1. and 2. is from the lemma. „4.“: \mathbb{T} separable metric space. So, it is enough to prove it for subbase. $f^{-1}(\mathbb{T}_s) \in \Pi_1^0 \subset \Sigma_2^0, f^{-1}(\mathbb{T} \setminus \mathbb{T}_s) \in \Sigma_1^0 \subset \Sigma_2^0(X)$. „3.“: $\{x \in X | h_\sigma(f(x)) < n\} = f^{-1}(\{T \in \mathbb{T} | \sigma|_n \notin T\}) = f^{-1}(\mathbb{T} \setminus \mathbb{T}_{\sigma|_n})$ is open (by the lemma). And $\{x \in X | h_\sigma(f(x)) < \infty\} = \bigcup_{n \in \omega} \{x \in X | h_\sigma(f(x)) < n\}$. □

└

1.4 Examples of Σ_1^1 non- Δ_1^1 sets

Poznámka

$$\Sigma_1^1(X) \setminus \Pi_1^1(X) = \Sigma_1^1(X) \setminus \Delta_1^1(X) \stackrel{?}{\neq} \emptyset.$$

Lemma 1.4

$\mathcal{T}_I \in \Sigma_1^1(\mathcal{T}) \setminus \Delta_1^1(\mathcal{T}), \mathcal{T}_W \in \Pi_1^1(\mathcal{T}) \setminus \Delta_1^1(\mathcal{T})$.

┌

Důkaz

1. $\mathcal{T}_I \in \Sigma_1^1(\mathbb{T}) \iff \mathbb{T}_I = \bigcup \bigcap \mathcal{T}_{\sigma|_n}$ souslin in PTS.

2. „ $\mathcal{T}_I \notin \Delta_1^1(\mathbb{T})$ “: By continuity $\mathcal{T}_I \in \Delta_1^1 \implies \mathcal{T}_W \in \Delta_1^1 \implies \mathcal{T}_W \in \Sigma_1^1 \implies \mathcal{T}_W$ souslin.

└ \nexists .

□

Poznámka

f_I, f_W are mappings from the lemma for $S = \mathcal{T}_I$ and $S = \mathcal{F}_W$. Clearly $f_I = \text{id}$.

Definice 1.4

$f : \mathcal{T} \rightarrow \mathcal{T}$ by $f(T) := f_I(T) \cap f_W(T) = T \cap f_W(T)$. $f(T) \in \mathcal{T} \iff (A, B \in \mathcal{T} \implies A \cap B \in \mathcal{T})$.

$$T \in \mathcal{T}_W \implies f(T) = T \cap f_W(T) \subset T \implies f(T) \in \mathcal{T}_W.$$

$$T \in \mathcal{T}_I \implies f(T) \subset f_W(T) \in \mathcal{T}_W \iff (\text{the lemma} \implies f^{-1}(\mathcal{T}_I) = \mathcal{T}_W \implies f^{-1}(\mathcal{T}_W) = \mathcal{T}_I) \implies f(T)$$

$\implies f : \mathcal{T} \rightarrow \mathcal{T}_W \implies h_\sigma \circ f : \mathcal{T} \rightarrow \omega$. From the previous proposition $h_\sigma \circ f$ is usc, so $h_\sigma \circ f$ is usc real function on compact set. Thus $m(\sigma) := \max_{T \in \mathbb{T}} h_\sigma(f(T)) \in \omega$.

Důkaz (The previous lemma)

By contradiction $\mathcal{T}_I \in \Delta_1^1(\mathcal{T}^*) \implies \mathcal{T}_W^* \in \Sigma_1^1(\mathcal{T}^*)$. $f(T) = f_I(T) \cap f_W(T)$, $f : \mathcal{T}^* \rightarrow \mathcal{T}^*$, $f : \mathcal{T}^* \rightarrow \mathcal{T}_W^*$. $\exists m(\sigma) := \max_{T \in \mathcal{T}^*} h_\sigma(f(T)) \in \omega$.

Define $T_0 \in \mathcal{T}^* : s \in T_0 \iff \sigma \in \mathcal{N} : \sigma|_{m(\sigma)+1} > s$. $T_0 \in \mathcal{T}^*$, $\{\emptyset\} \in T_0$, $T_0 \in \mathcal{T}$ trivial. $T_0 \in \mathcal{T}_W^*$. By contradiction $\sigma \in [T_0] \implies \sigma|_{m(\sigma)+2} \in T_0 \implies \exists \nu \in \mathcal{N} : \sigma|_{m(\sigma)+2} < \nu|_{m(\nu)+1} \implies \nu|_{m(\sigma)+1} = \sigma|_{m(\sigma)+1}$. Definition of $m(\nu)$ gives $\exists T \in \mathcal{T}^* : m(\nu) = h_\nu(f(T)) \implies \nu|_{m(\nu)} \in f(T) \implies \sigma|_{m(\sigma)+1} \in f(T) \implies h_\sigma(f(T)) \geq m(\sigma) + 1$. \nexists .

Clearly

$$T_0 \supseteq \bigcup_{T \in \mathcal{T}^*} (T). T_0 \in \mathcal{T}_W^* \implies f_W(T_0) \in \mathcal{T}_I \implies \exists \sigma_0 \in [f_W(T_0)] \implies$$

$$\implies h_{\sigma_0}(f(T_0)) = \min \{k \in \omega \mid \sigma_0|_k \in T_0 \cap f_W(T_0)\} = \min \{k \in \omega \mid \sigma_0|_k \in T_0\} \supseteq m(\sigma_0) + 1. \nexists.$$

□

Věta 1.5

X PTS, $A \in \Sigma_1^1(X)$, $\text{card}(A) > \text{card}(\omega)$. Then there exists $B \subset A$ such that $B \in \Sigma_1^1(X) \setminus \Delta_1^1(X)$.

Důkaz

$\text{card}(A) > \omega \implies \exists C \subset A$ homeomorphic copy of $2^\omega \sim 2^\mathbb{S}$. $2^\mathbb{S} \xrightarrow{h} A$ then $h(\mathcal{T}_I) \in \Sigma_1^1(X) \setminus \Delta_1^1(X)$. Homeomorphism of Σ_1^1, Δ_1^1 set is Σ_1^1, Δ_1^1 set. \square

Poznámka

Let Γ be class of subsets of PTS and X be PTS. We say that A is $\Gamma(X)$ -hard $\equiv \forall B \in \Gamma(\mathcal{N}) \exists f \in \Delta_1^1, f : \mathcal{N} \rightarrow X : f^{-1} = B$. A is $\Gamma(X)$ -complete $\Leftrightarrow A \in \Gamma$ and $A \in \Gamma$ -hard.

From the previous theorem $A \in \Sigma_1^1$ -complete $\implies A \in \Sigma_1^1 \setminus \Delta_1^1$ (same for Π_1^1). ($A \in \Delta_1^1 \implies f^{-1}(A) \in \Delta_1^1$, but there are $\Sigma_1^1 \setminus \Delta_1^1$ subsets of \mathcal{N}).

Poznámka

Σ_1^1 -complete $= \Sigma_1^1 \setminus \Delta_1^1 \iff \Sigma_1^1$ -determinacy.

Poznámka

$\mathcal{T}_I \in \Sigma_1^1$ -complete, $\mathcal{T}_W^* \in \Pi_1^1$ -complete.

Definice 1.5 (Universal set)

X PTS, Γ class of subsets of PTS. We say that A is $\Gamma(X)$ -universal $\equiv A \in \Gamma(X \times \mathcal{N}) \wedge \Gamma(X) = \{A^s | s \in \mathcal{N}\}$.

Poznámka

X PTS. Then

1. there exists $\Sigma_1^0(X)$ -universal set;
2. there exists $\Pi_1^0(X)$ -universal set;
3. there exists $\Sigma_1^1(X)$ -universal set.

┌

Důkaz

2 Kuratowski–Ulam theorem

Poznámka (Notation)

$A \subset X \times Y, X, Y$ sets. $A_X := \{y \in Y \mid [x, y] \in A\}$. $A^y := \{x \in X \mid [x, y] \in A\}$.

X topological space, $T(x)$ statement. $\forall^* x : T(x) \iff \{x \in X \mid T(x)\}$ is co-meager. $\exists^* x : T(x) \iff \{x \in X \mid T(x)\}$ is non-meager.

Věta 2.1 (Kuratowski–Ulam)

X, Y be topological spaces with countable base, $A \subset X \times Y$ has Baire property in $X \times Y$. Then

1. $\forall^* x : A_x$ has Baire property in $Y, \forall^* y : A^y$ has Baire property in X ;

2. A is meager $\Leftrightarrow \forall^* x : A_x$ is meager $\Leftrightarrow \forall^* y : A^y$ is meager;
3. A is co-meager $\Leftrightarrow \forall^* x : A_x$ is co-meager $\Leftrightarrow \forall^* y : A^y$ is co-meager.

Lemma 2.2

X, Y topological spaces, Y has countable base, $F \subset X \times Y$ nowhere dense. Then $\forall^* x : F_x$ is nowhere dense.

Důkaz

WLOG $Y \neq \emptyset$. $F \in \Pi_1^0(X \times Y)$ (otherwise for \overline{F}). Let $U := (X \times Y) \setminus F$. It is open and dense. We want $\forall^* x : \overline{U}_x = Y$.

$\{V_n\}$ base of Y , $V_n \neq \emptyset$. $U_n := \Pi_X(U \cap X \times V_n)$ dense open in X . (Open trivial. Dense $\Leftarrow G \in \Sigma_1^0(X), G \neq \emptyset \Rightarrow (G \times V_n) \cap U \neq \emptyset \Rightarrow [x, y] \in U \cap (X \times V_n)$.)

$x \in \bigcap U_n \Rightarrow x \in U_n \Rightarrow U_x \cap V_n \neq \emptyset \Rightarrow U_x$ is dense in Y . □

Důkaz (Kuratowski–Ulam)

$F \subset X \times Y$ meager $\Rightarrow F \subset \bigcup F_n, F_n \in \Pi_1^0$, nowhere dense. By the previous lemma $\exists M_n \subset X$ co-meager: $\forall x \in M_n : (F_n)_x$ is nowhere dense. $M := \bigcap M_n$ co-meager $\Rightarrow \forall x \in M \forall n \in \omega : (F_n)_x$ is nowhere dense $\Rightarrow F_x \subset \bigcup (F_n)_x$ is meager.

Let $A \subset X \times Y$ has Baire property $\Rightarrow A = U \Delta M, U \in \Sigma_1^0, M$ meager. $A_x = U_x \Delta M_x$ (open Δ meager for co-meager many x) $\Rightarrow \forall^* x : A_x$ has Baire property. This implies 1.

Clearly 2. \Leftrightarrow 3. using complements. It remains to show 2. \Leftarrow . □

Lemma 2.3

X, Y topological spaces with countable base, $A \subset X, B \subset Y$. Then $A \times B$ is meager $\Leftrightarrow A$ or B is meager.

Důkaz

„ \Rightarrow “: $A \times B$ meager, A non-meager. Then by the previous lemma $\exists x \in A : (A \times B)_x = B$ meager.

„ \Leftarrow “: A is meager, $A \subseteq \bigcup F_n, F_n \in \Pi_1^0$, nowhere dense. Then $A \times B \subset \bigcup (F_n \times B)$. We need to show that $F_n \times B$ is nowhere dense. $X \setminus F_n$ open dense $\Rightarrow (X \setminus F_n) \times Y$ open dense in $X \times Y \Rightarrow F_n \times Y$ is nowhere dense $\Rightarrow F_n \times B$ is nowhere dense. □

Důkaz (Kuratowski–Ulam remaining 2. \Leftarrow)

$A \subset X \times Y$ has Baire property, $\forall^* x : A_x$ is meager. $A = U \Delta M$ (open Δ meager). For contradiction we assume that A is not meager (U is not meager). $\Rightarrow \exists G \in \Sigma_1^0(X), H \in \Sigma_1^0(Y) : G \times H \subset U, G \times H$ is not meager ($\Leftarrow X, Y$ have countable base).

$\xRightarrow{\text{lemma}} G, H \text{ non-meager} \implies \exists x \in G : A_x \text{ is meager, } M_x \text{ is meager (} \iff \forall^* x : M_x \text{ is meager)}$. Clearly non-meager $H \setminus M_x \subseteq U_x \setminus M_x \subset U_x \triangle M_x = A_x$ meager. \nexists . \square

Například

$\exists A \subset [0, 1]^2$, A non-meager and there are no three points in A on a straight line.

Důkaz

$\{F_\alpha, \alpha < 2^\omega\}$ meager F_σ sets. We will construct $\{x_\alpha, \alpha < 2^\omega\}$ such that $x_\alpha \notin F_\alpha$ and there are no 3 points on the same line. By induction: 1) $\alpha = 0 : x_0 \in [0, 1]^2 \setminus F_0$.

2) We already have $\{x_\beta, \beta < \alpha\} \subset [0, 1]^2$, $\alpha < 2^\omega$ such that $\forall \beta < \alpha : x_\beta \notin F_\beta$ and there are no 3 points on the same line. $\mathcal{M} := \{p \text{ line} \mid \exists \beta, \gamma < \alpha : x_\beta \neq x_\gamma \wedge x_\beta, x_\gamma \in p\}$. Clearly $\# < 2^\omega$. From Kuratowski–Ulam: $\forall^* t \in [0, 1] : (F_\alpha)_t$ is meager. We find $t \in [0, 1] \setminus \Pi_1(\{x_\beta, \beta < \alpha\})$ such that $(F_\alpha)_t$ is meager.

$\implies \text{line } \{[t, y], y \in \mathbb{R}\} \notin \mathcal{M} \implies \forall p \in \mathcal{M} : \#\{y \in [0, 1] \mid [t, y] \in p\} \leq 1$. So $\exists y \in [0, 1] : [t, y] \notin \bigcup \mathcal{M} \cup F_\alpha$. $(F_\alpha)_t$ is meager and $\#(\bigcup \mathcal{M}) \cap \{[t, y], y \in \mathbb{R}\} \leq \#\mathcal{M} < 2^\omega$. Put $x_\alpha := [t, y]$. \square

3 Measurable selections

Definition 3.1 (Uniformization, selection)

Let X, Y sets, $C \subset X \times Y$ and $F : x \mapsto C_x$ is mapping from X to $\mathcal{P}(Y)$. $U \subset C$ is uniformization of C if $|U_x| = 1$ for $C_x \neq \emptyset$ ($x \in \Pi_X(C)$), (U is a graph of mapping $X \rightarrow Y$).

Mapping $f : D_f \rightarrow Y$ ($D_f = \Pi_X(C) = \{x \in X \mid F(x) \neq \emptyset\}$) is selection of F , if $f(x) \in F(x)$, $x \in D_f$.

Poznámka (Kondo–Norikov)

X, Y Polish topological spaces, $C \in \Pi_1^1(X \times Y)$. Then there exists $B \in \Pi_1^1(X \times Y)$ uniformization of C .

Poznámka

The theorem above implies if $A \subset M \times \{0, 1\}$ (M metric space) is cosouslin then there exists cosouslin uniformization.

$A_i := \Pi_x(A \cap M \times \{i\})$. $B_0 \cup B_1 = M \implies B_0 \times \{0\} \cup B_1 \times \{1\}$ is uniformization. $B_0 \subset A_0$, $B_1 \subset A_1$, $B_i \in \Pi_1^1$, $B_0 \cap B_1 = \emptyset$. Similarly, we can do reduction for countable collections.

TODO!!! (Kondo–Norikov is not true in Σ_1^1 .)
